Meaningful data makes a meaningful picture.

This week: what you collect, and what the AI makes of it. Next week: the people you ask.

E401, then the PC Lab · Prof. DY Kwon · SMIT E-BUSINESS

Look around. Build one. Practise.

One — the world of services you can connect, and what each one needs

Two — build it: a survey → one report + one infographic, from a template

Three — practise with your own answers until the data means something

Week 7 is about data. Week 8 is about people.

	Week 7 · today	Week 8 · midterm
The idea	**Meaningful data → a meaningful picture**	**Connection with people**
You ask	What must I collect so the answer means something?	Who should I ask — and how do I ask so they answer honestly?
You make	A survey and an automation that turns answers into one picture with real numbers	Real answers from real people, and the value you find in them

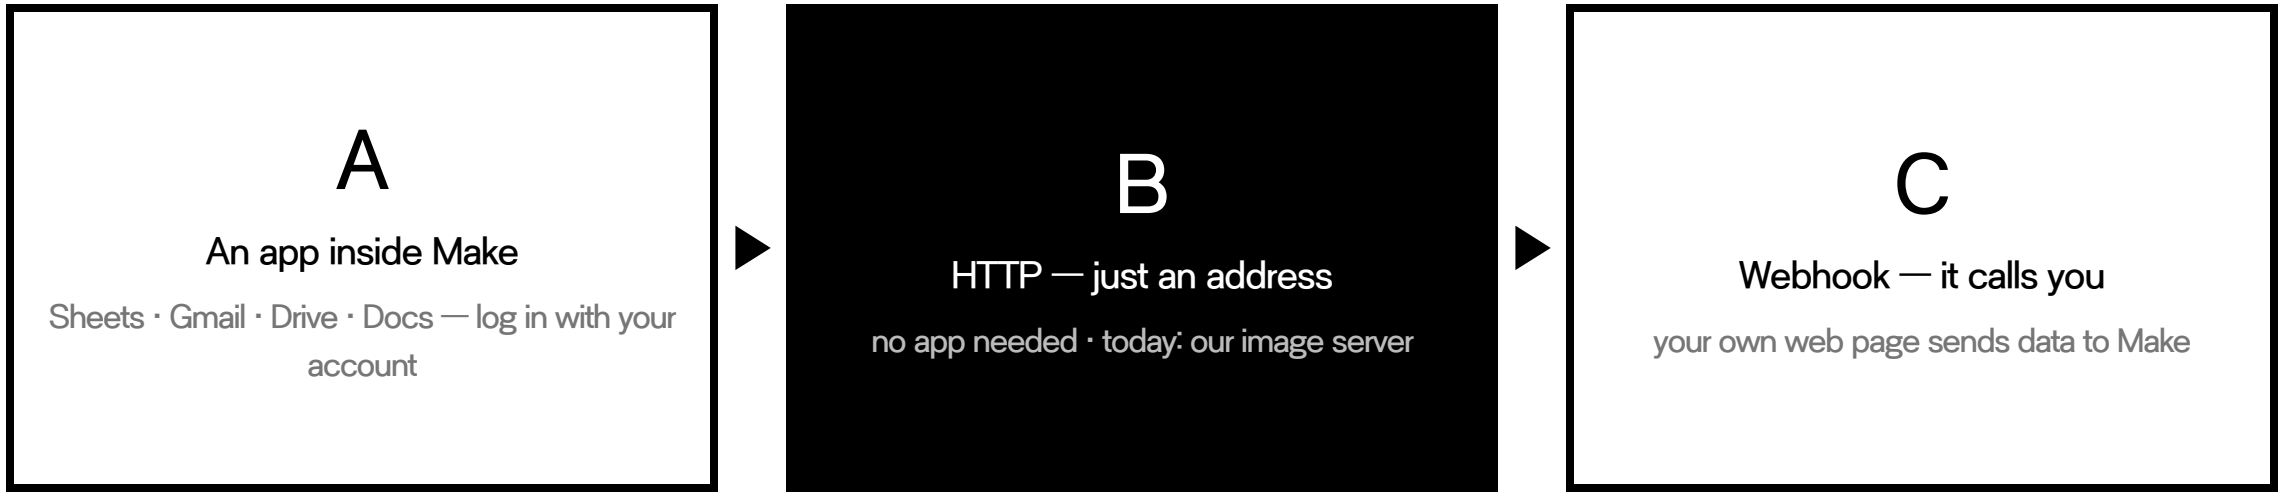

Without real data the picture is decoration. Without real people there is no real data.

Make has thousands of templates. Each one is just services, connected.

Template you can find in Make	What it needs from you
Send a Gmail email from a new Google Sheets row	Your Google account — **free**
Save new Gmail attachments to Google Drive	Your Google account — **free**
Add webhook data to a Google Sheet	A web page that sends data — **free**
Generate ChatGPT completions from Sheets rows	An OpenAI key — **paid, needs a card**
Create Canva designs from Google Sheets	Filling designs with data needs **Canva Enterprise**
Chatbot for WhatsApp / Telegram	A business account on that app

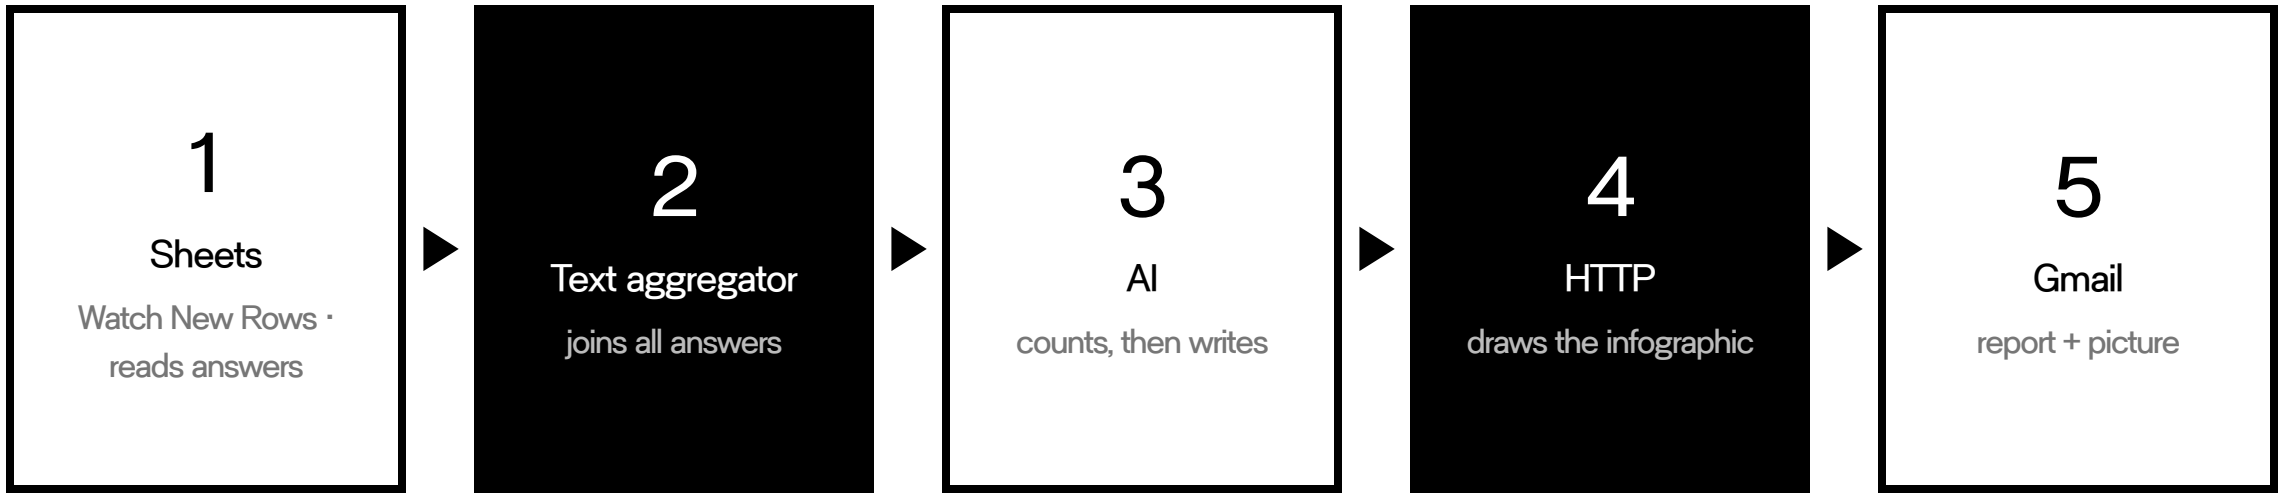

Every service asks for two things: your account, and sometimes your money.

The same idea every time: a door, and who may open it

API = a door you can call with an address. Input goes in, output comes back. Some doors need a key (paid AI). Our image door needs only your student ID.

Five points. One run. One email.

You do not build it from zero. You copy a template — then you make it yours.

Five friends answer your survey. How many emails do you get?

Make reads **5 rows**. Each row is one **bundle** — one person's answers. Every point after Sheets runs **once per bundle**.

Without the aggregator: 5 runs of the AI, 5 pictures, **5 emails** — one person each.

With the Text aggregator: the 5 bundles are joined into **one text**. The AI sees everyone at once, so it can count — **1 email**, "4 of 5 customers".

That is why the aggregator is the heart of today.

Limit, and where Make starts

10

Limit — how many new rows Make takes in one run

All

Choose where to start → All — read every row again

Save

nothing counts until you press Save

Make remembers the last row it used. Run once twice without choosing All, and the second run finds “nothing new” — no email.

The AI can only count what you ask well

1. **One thing per question.** “Price and quality?” is two questions.
2. **Make it countable.** Multiple choice or checkboxes → “4 of 5”.
3. **Only ask what changes your decision.** No change → delete it.

Part 2 — for the picture: age group · how you want to appear · where you would use it · mood.

Never ask names, phone numbers, student IDs or photos.

Every Google point needs YOUR account

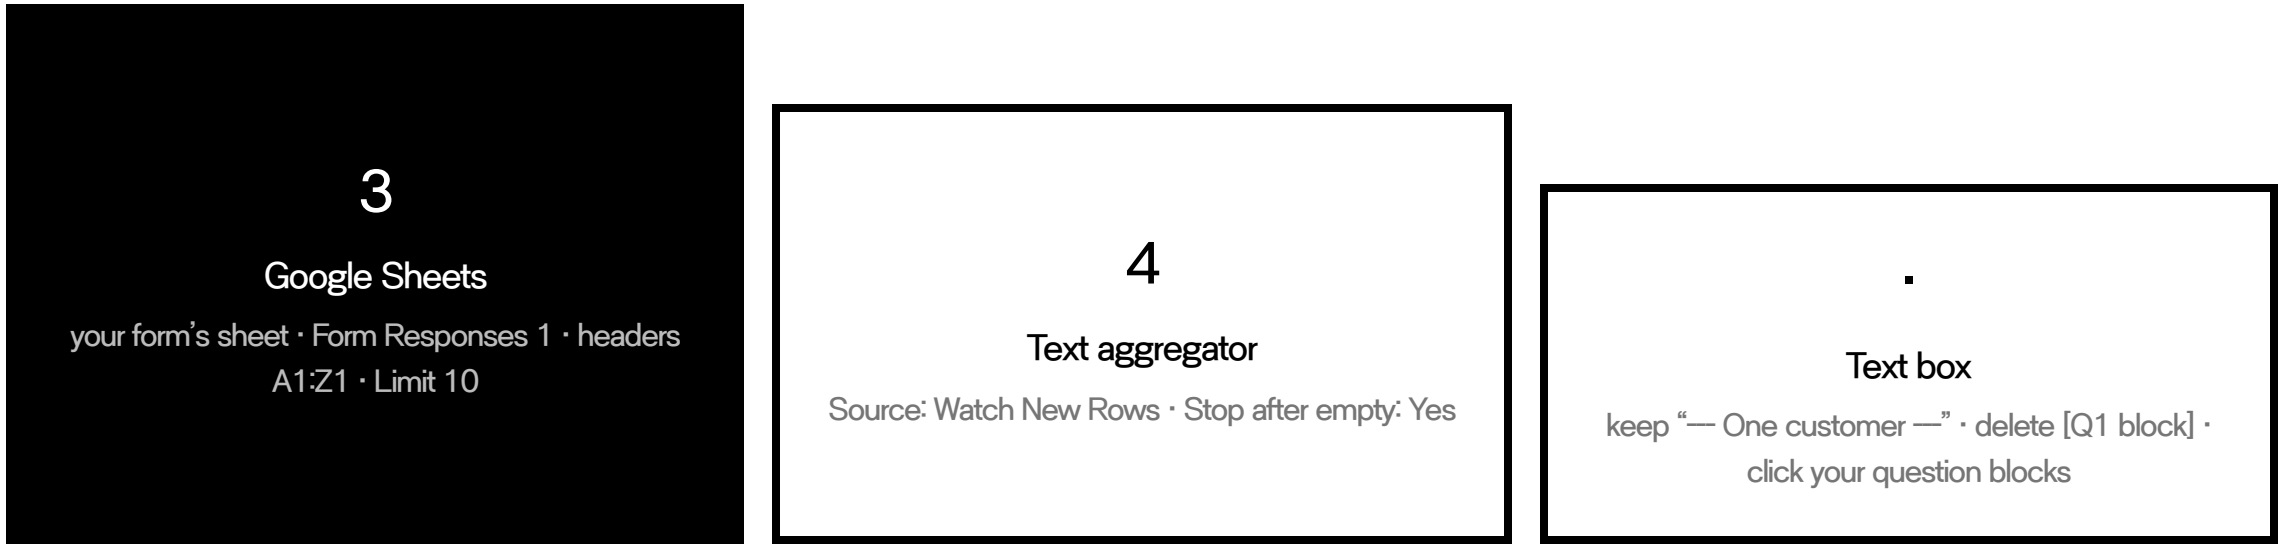

Open the template → **Create new scenario from template**.

Click **Google Sheets** → Connection → **Add** → sign in → **tick every box** → Allow. Then the same for **Gmail**.

AI Toolkit: keep Make's AI Provider. **HTTP:** keep No authentication.

The professor's login does not come with the template — and it must not.

Point it at your sheet. Put your questions in.

What goes into this box is all the AI will ever see.

Change one line: My business

My business: [ONE SENTENCE ABOUT YOUR BUSINESS] → replace the brackets with one real sentence.

The rest of the prompt asks for **STATS** first ("4 of 5", lowest / average / highest) and then a **3-sentence report**.

Real mistake from last night: the professor left the brackets. The email started with "ONE SENTENCE ABOUT YOUR BUSINESS" — and the picture used it as its title.

Every [BRACKET] must be replaced or deleted.

Draw a [STYLE] showing [WHO] in [WHERE]. Mood: [MOOD]. Use EXACTLY these numbers.

Style ideas	Why it works
Infographic with bar charts	Numbers are easy to read
3-panel comic strip	Need → price → recommendation, like a story
Newspaper front page · TV weather report	People read headlines
Video-game map · LEGO scene · retro poster	People remember fun

Change one word at a time. Keep `&id=` + your student ID at the end. 10 pictures a day.

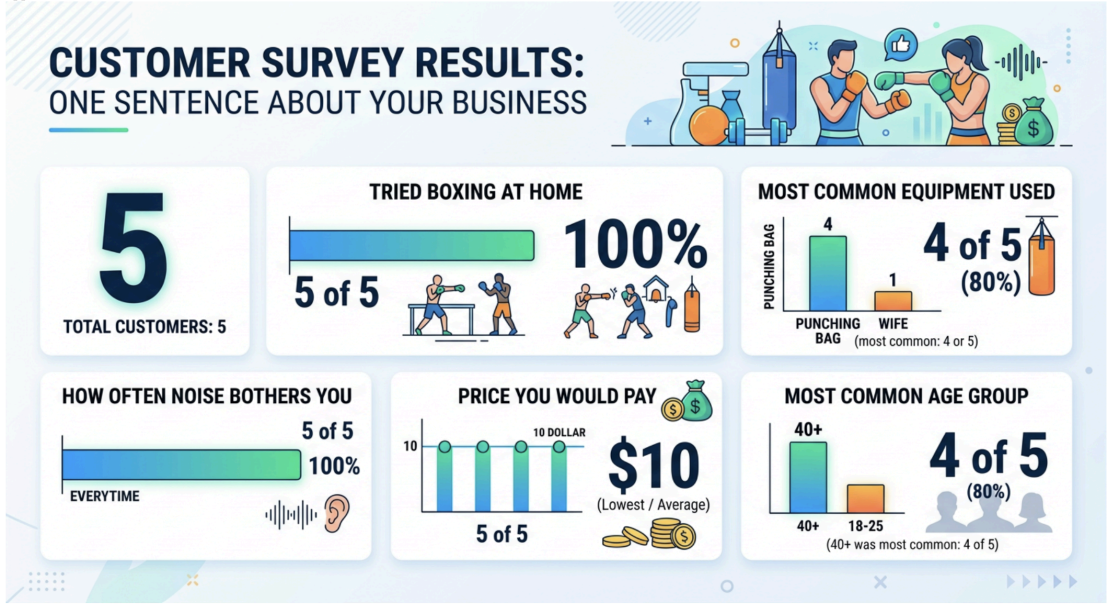

Click the circle. Save. All. Run once.

1. Gmail: **your** email + keep smit.ai.lab@gmail.com · Subject **W7 · your name · …**
2. Attachments → File: **click the circle** next to HTTP - Download a file
3. **Save**
4. Answer your own form **twice** → Sheets → Choose where to start → **All** → **Run once**
5. Delete your test rows → send the form link to **5 classmates**

One email: STATS + report + infographic

Your name <your-email@gmail.com> Inbox 2:08 AM
W7· [YOUR NAME] · My business report
To: You <your-email@gmail.com> smit.ai.lab@gmail.com

ONE SENTENCE ABOUT YOUR BUSINESS STATS: - Customers: 5 - For each question: - Tried boxing at home: yes (5 of 5) - What you used: punching bag (4), punching bag, wife (1) – most common: punching bag (4 of 5) - How often noise bothers you: everytime (5 of 5) - Price you would pay: 10 dollar (5 of 5) - Who you are: 40+ (3), 18 – 25 (1), 40+ (1) – most common: 40+ (4 of 5) - If a question asks for a price or number: lowest / average / highest - Price you would pay: lowest 10 dollar, average 10 dollar, highest 10 dollar REPORT: (1) All customers tried boxing at home and use a punching bag; noise bothers them constantly; they' re willing to pay around $10. (2) The age group 40+ is most represented, with one younger respondent, and mix of "wife" as an item used appears only once. (3) Recommendation: emphasize quiet, home-friendly boxing setups (punching bag options) and offer a simple $10 starter kit or trial to appeal to both 40+ and 18 – 25 customers.

Count one question in your sheet by hand. Same number in the picture?

The ones that will actually happen

What you see	What to do
No email at all	Did you press **Save**? Choose **All** before Run once?
Email, but no picture	Gmail → Attachments → click the **circle**
HTTP: Bad Request	Answer block **inside** encodeURL(⋯) · your ID after &id=
HTTP: Bad Gateway	Start the picture prompt with **“Draw ⋯”** · shorter report
“Student ID not found”	The ID you log in with on the class site
Connection / permission error	Add → your account → **tick every box** → Allow

Write down the exact words on screen. Ask three people. Then raise your hand.

— SUBMIT TODAY

Talk to the AI assistant on the class site

No questions this week. Type the Gmail address you connected in Make. The server checks: your W7 email reached smit.ai.lab@gmail.com with **W7** in the subject → **submitted**.

Submitting in class = attendance. Until 18:00 on time; later still counts.

Finished early? ⭐ Rewrite the picture prompt in a new style and send a second one.

Reach real people. Ask them honestly. That value is the exam.

No class on Oct 21. During the week you **tell people about your survey** and ask them for an honest answer — at least **5 classmates**. **5 classmates** answer your survey → **Choose where to start** → **All** → **Run once** → one report email with the infographic reaches smit.ai.lab@gmail.com with **W8** in the subject.

Then answer in the AI assistant chat: **People** — who did you ask, how, and why would they answer honestly? · **AI** — what did it find? · **Output** — what will you change in your business?

Not finished today? Finish this week with the tutorial PDF. On Oct 21 the assistant is open on **every week's page** — submit Week 7 and **everything you missed**.

Deadline Wednesday Oct 21, 18:00. Change the template to fit your business ⇒ extra ★

What you have now

Your form collects. **The aggregator joins. The AI counts. An outside door draws.** Your inbox receives one picture — and it means something only if the data does.

This week you built the machine and tested what it makes of data.

Next week the real work: reach people, ask them honestly, and find the value in what they say.
