

From text in an email — to a file in your Drive

Wednesday 12:00–14:50 · Lecture: E401 · Practice: PC Labs · Prof. DY Kwon

Last week the report came as text inside the email. Today it comes as a file — a Google Doc in your Drive, and a PDF attached to the email. Three moves inside last week's scenario. No key, nothing new to sign up for.

Six points at the end: Sheets → Gather → Gemini → Drive → Docs → Gmail. No Week 5 scenario? Build Week 5 first — late still counts as attended.

Move 1 — Swap the AI (review)

1 Google Gemini AI · Simple text prompt

Right-click the line between your old AI point and Gmail → **Add a module** → search **Gemini** → app **Google Gemini AI** → **Show more** → **Simple text prompt**. Model: **Gemini 2.5 Flash** (the only one without "Paid plans only"). Then **right-click** the old AI point → **Delete module**.

Text prompt — paste this, then click the green **Text block at the end**: Analyze the survey answers about my business. Write a short report in PLAIN TEXT: no markdown, no asterisks. Line 1: a title. Then three sections with the headings WHAT CUSTOMERS WANT, WHAT THEY WILL PAY, ONE RECOMMENDATION — each heading on its own line, then one or two short sentences. Leave an empty line between sections. ANSWERS:

Move 2 — Save it as a Doc

2 Google Drive · Create a File from Text

Right-click the line between Gemini and Gmail → **Add a module** → **Google Drive** → **Create a File from Text**.

Connection: **Add** → the same Google account as your Gmail → allow (a permission window — use the PC). **Choose a Drive**: My Drive. **New Text File Location**: press +, make a folder **Automation in AI**. **File Name**: W6 report. **File Content**: Gemini's **Result** block. **Convert to Google Docs Document**: Yes. Save.

Move 3 — Attach it as a PDF

3 Google Docs · Download a Document

Right-click the line between Drive and Gmail → **Add a module** → **Google Docs** → **Download a Document**. **Document ID**: the Drive point's **File ID** block. **Format**: PDF. Save.

Why a fifth point? Drive gives you the file's name and ID — not its contents. Docs downloads the contents, and that is what an attachment needs.

4 Gmail · attach, then run

Orange bar "**reauthorize your connection**"? Reauthorize → sign in → Save. **Content**: delete last week's AI block, type *Your report is attached*. **Attachments** → **Add item**: File name = the Docs point's **File Name** · Data = the Docs point's **Data**. Subject: **W6 · your name · My report as PDF**. Keep **smit.ai.lab@gmail.com** in To. Right-click **Sheets** → Choose where to start → **All** → Save → **Run once**. Open the email, open the PDF, look in Drive.

CHECK BEFORE YOU SUBMIT — all five: ☐ six points: Sheets, Gather, Gemini, Drive, Docs, Gmail ☐ the PDF opens — a title and three headings ☐ the Doc is in the folder in Drive ☐ Subject starts with W6, smit.ai.lab@gmail.com in To ☐ the old AI point is gone

Submit: talk to the AI assistant — the Gmail address you connected, then: the first lines of your PDF · the folder and file name in Drive · text in the email vs a file, which is more useful and why. No **W6** in the subject = not accepted. · ★ **Extra**: put the Doc's link in the email too (Drive's **Web View Link** block under "Your report is attached.") — a star goes on your card. · **Stuck?** Drive connection fails on a phone → use the PC · orange bar on Gmail → Reauthorize · PDF is one block with asterisks → paste the new prompt · attachment empty → Data comes from the Docs point · nothing came → no new row.
