

From text in an email to a file in your Drive

Three moves inside last week's scenario. Nothing new to sign up for.

E401, then the PC Lab · Prof. DY Kwon · IGS e-Business

Short talk. Long practice.

One — swap Make's AI for Google Gemini (a review)

Two — save the report as a Google Doc, in a folder you make

Three — attach it to the email as a PDF

Week 6 changes points inside it. Build Week 5 first.

Today we do not build a new scenario. We open **last week's** and change it. If it is not there, there is nothing to change — and the assistant will send you back to Week 5 first.

Open the Week 5 page now. Put your hand up and someone who finished will sit with you.

Join us the moment it runs. Late still counts as attended.

The report moves out of the email and into a file

Same form, same sheet, same gathering point. Two new points do the saving and the attaching. One point changes AI.

Four points become six: Sheets · Gather · Gemini · Drive · Docs · Gmail

Right-click the line, as always

1

Right-click the line

old AI → Gmail · Add a module

2

Google Gemini AI

search "Gemini" · Show more ·
Simple text prompt

3

Model: Gemini 2.5 Flash

the only one without "Paid plans
only"

4

Delete the old AI point

right-click → Delete module

No key, no connection box — Make runs it on its tokens. That is the review. Next week we talk about keys.

Plain text — so the PDF looks like a report

Analyze the survey answers about my business. Write a short report in PLAIN TEXT: no markdown, no asterisks. Line 1: a title. Then three sections with the headings WHAT CUSTOMERS WANT, WHAT THEY WILL PAY, ONE RECOMMENDATION — each heading on its own line, then one or two short sentences. Leave an empty line between sections. ANSWERS: + the green Text block

Last week's prompt made one long block with asterisks. A Doc shows exactly what Gemini writes — so we tell it the shape.

Google Drive → Create a File from Text

1

**Right-click the line Gemini →
Gmail**

Add a module · "Google Drive" ·
Create a File from Text

2

Connection: Add

same Google account as your Gmail
· allow

3

My Drive · folder · File Name

press + · name the folder
"Automation in AI" · file "W6 report"

4

**File Content: Result · Convert:
Yes**

Gemini's block · Google Docs
Document

The first outside service that is not Make. A Google permission window appears once — use the PC.

Google Docs → Download a Document, then Gmail

Gmail: Content → delete the old AI block → Your report is attached. → **Attachments** → **Add item** → File name = Docs **File Name** · Data = Docs **Data**

Six points, then Run once

1. Subject: **W6 · your name · My report as PDF** · keep smit.ai.lab@gmail.com in To
2. Orange bar on Gmail — "**reauthorize your connection**"? Reauthorize → sign in → Save
3. Count: **Sheets · Gather · Gemini · Drive · Docs · Gmail**
4. Right-click **Sheets** → Choose where to start → **All** → Save → **Run once**

Nothing came? No new row. Fill in your own form once more, then Run once again.

And open your Drive

The email has a PDF. Open it: a title, three headings, short lines.

drive.google.com → the folder **Automation in AI** → the Doc **W6 report**. It will be there every day from now on.

Last week it was gone after you read it. Today it is kept, and it can be sent.

All five

6

points: Sheets · Gather ·
Gemini · Drive · Docs ·
Gmail

PDF

opens — a title and
three headings

Doc

is in the folder in Drive

W6

subject starts with it ·
smit.ai.lab@gmail.com
in To

0

old AI points left

Talk to the AI assistant on the class site

It asks for the Gmail address you connected, then three things: the first lines of your PDF · the folder and file name in your Drive · text in the email vs a file — which is more useful for a business, and why.

The server checks my inbox for an email from that address with **W6** in the subject. No W6, no submission. Submitting in class = attendance. Until 18:00 on time; later still counts.

Finished early? ★ Put the Doc's link in the email too (Web View Link). Tell the assistant — a star goes on your card.

The ones that will actually happen

What you see	What to do
Drive connection fails on a phone	Use the PC. The Google permission window needs a browser
Orange bar on the Gmail point	Week 5 was 7 days ago. Reauthorize → sign in → Save
The PDF is one long block with asterisks	You kept last week's prompt. Paste the new one
The attachment is empty or missing	Data must come from the Docs point, not Drive
"Quota" or "429"	Wait one minute, then Run once
Run once sends nothing	No new row. Fill in your form once more

Write down the exact words on screen. Ask three people. Then raise your hand.

What you have now

Your form asks. Your sheet collects. A point gathers. **Gemini reads. Drive keeps. Docs converts.** Your inbox receives a file.

You plugged in two outside services today — Drive and Docs — the same way every service joins: a connection, a module, blocks.

Next week: what else can plug in, what a key is — and you plan your own automation.
