

Values travel

Every point hands something to the next one. Today you do that four times.

E401, then the PC Lab · Prof. DY Kwon · IGS e-Business

Short talk. Long practice.

One — the move: take a value from the point before, and drop it into your own text

Two — two new points: one gathers every answer, one is an AI that reads them

Three — the AI writes a report on your business, and mails it to you

Week 5 sits on top of it. Build Week 4 first.

There is nothing to add to an empty screen — and the assistant will send you back to Week 4 before it starts Week 5 with you.

Open the Week 4 page now. The handout and the assistant walk you through it. Put your hand up and someone who finished will sit with you.

Join us the moment it runs. Late still counts as attended.

You already do this by hand, every day

You write a letter once, and leave the blanks empty:

Dear _____, thank you for your answer about _____. You said it happens _____ times a week.

Then you open your sheet and fill the blanks in by hand. Every time. For every row.

Today you write the letter once, and the blanks fill themselves.

Every point holds named values. Click any box and they appear.

A point is not just a thing that runs. **It runs, and then it holds a handful of values, with names on them.** Your sheet holds (A) the time, (B) answer 1, (C) answer 2, (D) answer 3.

Click inside **any box** of a later point, and a panel opens on the **left** — grouped **by the point that made them**:

1. Google Sheets

(A) (B) (C) (D) ...

2. Text aggregator

Text

3. Simple text prompt

Answer

Type, click, type, click

You are not choosing **either** your words **or** a block. **You mix them.**

What you do	What arrives
Type Problem: → click the block (B) → type 	Problem: it takes too long to order
Type They now use: → click (C) → type 	They now use: a paper notebook

One box. Your words and their values, side by side.

All three happened last week

What you do	What arrives	Why
You type "(B)" with the keyboard	the letters (B)	typing is not clicking. It must come from the panel
You click the top block [bundle]	the whole row, as code	that block is everything at once, not one answer
You press Enter for a new line	everything on one line	the box is Raw HTML. Type <code>
</code> instead

If your email looks wrong, it is almost always one of these three.

Watch where the block comes from each time

	The box you click in	Where the block comes from
1	Gmail → Content (last week — review)	Google Sheets
2	the gathering point → Text	Google Sheets
3	the AI point → prompt	the gathering point
4	Gmail → Content (replace it)	the AI

The move never changes. Only the point you take from.

Two new points, pushed into the middle

Last week ten new answers meant **ten separate emails** — and an AI reading one answer at a time can never tell you "four people said the same thing."

10

DYKWON · AI-based BPA · Week 5
emails yesterday, one per answer

1

report today, all answers together

Right-click the line. Never the plus.

1. Open **last week's scenario** (Scenarios → click it)
2. **Right-click the LINE** between Sheets and Gmail → **Add a module**
3. Search **Tools** → **Text aggregator**
4. **Source Module:** Google Sheets – Watch New Rows

Both new points go in the same way — right-click the line you want to break. The + on the right adds a point at the END, after the email has already gone.

The gathering point's Text box

Click inside the **Text** box. The panel opens on the left — the same blocks as last week.

Build one answer's worth of text, exactly like your email:

Then **Advanced settings** → **Row separator**: New row → OK.

Many rows in. One value out, named **Text. That is what the AI will read.**

And what they really cost you

	Made by	To connect it yourself
ChatGPT	OpenAI	a card, and \$5 loaded before it answers once
Gemini	Google	a Google account. Free.
Claude	Anthropic	a small starter credit, then a card. No free tier.

Checked 2026-09-28 · openai.com · ai.google.dev · claude.com

Today you need none of that — Make has an AI built in.

The same answers, different brains

Watch the screen. One prompt, one set of answers — and the reports come back different.

The **shape** is the same. The **length**, the **detail** and what each one **notices** are not.

Choosing a model is a real choice. Today we all take the same one, so we debug the same thing.

Again: right-click the line

1. **Right-click the LINE** between the gathering point and Gmail → **Add a module**
2. Search **Simple text prompt** → choose it
3. **Model:** open the list and take the one at the top

No account. No API key. No card. **Gemini is not in this list** — it needs its own key, and we are not spending class time on that today.

Your instruction, plus one block

Click in the **prompt** box. **Type your instruction first**, then click **one** block at the end.

You are helping a student understand their small business.
Below are real answers from a survey. Write a short report, under 150 words:
what people said · what repeats · one thing to change.
Write simply. Do not invent anything that is not in the answers.
Put `<br>` at the end of every line of your answer.

ANSWERS:

[click the block named Text, from the gathering point]

Not the sheet — the point right before. And without that `<br>` line, the whole report arrives as one long line.

Put the report in the email

1. Open your **Gmail** point → click in **Content**
2. **Delete everything that is in there** from last week
3. In the panel, find the group **Simple text prompt**
4. Click its block — the one named **Answer**

Subject: **W5 · your name · My business report** · keep
smit.ai.lab@gmail.com in To

The box where the sheet's blocks used to go. Now the AI's block goes there.

And read what comes

Right-click **Sheets** → **Choose where to start** → **All** → Save. Then press **Run once**.

Nothing came? No new row since last time. Fill in your own form once more, then Run once again.

Ten answers went in. One report came out. You built that.

The free tier reads your text

Google says it plainly: on the **free** tier, what you send **"is used to improve our products."** On the paid tier it is not. The same is true of the other free AIs.

ai.google.dev/gemini-api/docs/pricing · checked 2026-09-28

So: survey answers about a business idea, yes. **Names, phone numbers, ID numbers, anything a person told you privately — no.**

Know this before you use one at work.

All five

1

Your scenario has
four
points, in order

2

The AI's prompt ends
with the block from the
gathering point

3

Gmail's Content holds
the AI's
Answer
block — and nothing
from last week

4

Subject starts with
W5
, and
smit.ai.lab@gmail.com
is still in To

5

You pressed
Run once
and the report arrived
in your Gmail

No W5 in the subject = not accepted. The server checks my inbox, not your word.

Talk to the AI assistant

First it asks for the Gmail address you connected in Make —
type it, and the server checks my inbox right then. Then three
questions:

1. **Paste the report** the AI wrote for you.
2. **What did it get right, and what did it miss?** You know your answers better than it does.
3. **Because of this report, what is one thing you will change** in your business idea?

Write in your own language. Submitting today is your attendance.

The five that will actually happen

What you see	What to do
The prompt box shows the letters, not the value	You typed it. Delete it and click the block
The AI point landed after Gmail	You used the + . Right-click the line instead
The AI answers about nothing	Your block went in before your instruction, or not at all
The report arrives as one long line	The <code>
</code> sentence is missing from your prompt
Run once sends nothing	No new row. Fill in your form once more

Write down the exact words on screen. Ask three people. Then raise your hand.

What you have now

Your form asks. Your sheet collects. A point gathers. An AI reads.
Your inbox receives.

Five pieces, and you connected every one of them by hand.

Finished early? Change the instruction and run it again — same answers, a different report.

Next week: people sign up for your business.
