One move, four times. You take a value from the point before and drop it into your own text — four boxes, each time from a different point. Two new points go into last week's scenario: one gathers the answers, one is an AI that reads them.

The one move — type, click, type, click

A A box is one text with holes

Click inside **any** box of a later point: a panel opens on the **left**, grouped **by the point that made them**. Mix your words with their values — Problem: → **click** block (B) →
 → Now uses: → click (C).

Step 1 — The gathering point (mapping 2 of 4)

1 Push it in, then map one answer

Open **last week's scenario**. **Right-click the LINE** between Sheets and Gmail → **Add a module** → **Tools** → **Text aggregator**. Source Module: **Google Sheets** — **Watch New Rows**. **Both new points go in this way**. The + on the right lands at the END, after the email has gone.

In its **Text** box: label, block, repeat — Problem: (B), Now uses: (C), Pays: (D). Then **Advanced settings** → **Row separator: New row**. Many rows go in; **one** value comes out, named **Text**.

Step 2 — The AI (mapping 3 of 4)

2 No account, no key, no card

Right-click the LINE between the aggregator and Gmail → **Add a module** → **Simple text prompt**. **Model:** take the one at the top. Make gives you a **free model for testing** — no account, no key, no card. **Gemini is not in that list**; connecting your own AI with a key is **next week**.

3 Instruction first, then one block

In **prompt**: who it helps, under 150 words, three things (what people said · what repeats · one thing to change), **"do not invent anything not in the answers"**, and **"put
 at the end of every line"** (Content is Raw HTML — without it the report arrives as one long line). End with **ANSWERS:** and **click the block named Text** — from the gathering point, not the sheet.

Step 3 — Into the email (mapping 4 of 4), then run

4 Swap Content, then Run once

Gmail → click **Content** → **delete last week's blocks** → find the group **Simple text prompt** → click its block, named **Answer**. Subject: **W5 · your name · My business report**. Keep **smit.ai.lab@gmail.com** in To.

Right-click **Sheets** → **Choose where to start** → **All** → **Save** → **Run once**. Nothing came? No new row. **Careful:** free-tier text "is used to improve our products" — survey answers yes, names and phone and ID numbers no.

CHECK BEFORE YOU SUBMIT — all five: ☐ four points, in order ☐ the AI's prompt ends with the gathering point's block ☐ Content holds the AI's block only ☐ Subject starts with W5, smit.ai.lab@gmail.com in To ☐ Run once → the report arrived

Submit: paste the report · what it got right and missed · one thing you will change. Type the Gmail address you connected when asked. No **W5** = not accepted. · **Stuck?** Letters instead of a value → you typed it; click the block.
