

Before you automate, you ask

Wednesday 12:00–14:50 · Lecture: E401 · Practice: PC Labs · Prof. DY Kwon

The professor shows one module at the front of the room — you watch, you do not click. Make starts for you next week, with the same Google account.

Sign into the Google account you are keeping, then build the thing Make will watch — a short survey, a real Google Form, a spreadsheet that fills itself, and one sentence that introduces you.

Step 1 — Design your five questions (talk to the AI assistant first)

1 · Problem

Have they faced this situation before?

2 · Current fix

How do they solve it now? Do they already pay for something?

3 · Size

How often does it happen — how much does it bother them (1–5)?

4 · Price

If this were solved for them, what would they pay a month?

5 · Who — one or two lines about who is answering. Good surveys ask what people have **already** done, not what they *would* do — people are honest about the past and polite about the future.

Step 2 — Build it, and test it

1 The form

forms.google.com → blank form. A title, two or three lines on what your business is, then your 4–5 questions. Mix one rating (1–5) with open text.

Keep it short — people stop answering around question six.

2 The sheet

Open **Responses** → the green sheet icon → **Create a new spreadsheet**.

Why: from this second, every answer lands in a row by itself — Google already automated this, before Make ever touches it.

3 Test it yourself

Fill in your own form once and submit. Open the spreadsheet — a new row appeared, by itself.

That is automation happening, with your own hands, on your own idea.

Starting next week, your name, your character, and your one-line business pitch appear on a class gallery page with a QR code to your form — open to the whole school, not just this class. Write your one line like a stranger will read it, because they will. And: this exact form becomes a module next week in Make.

Submit: talk to the AI assistant, then give four things — your **Google account**, your **form link**, your **response sheet link**, and your **one-line business intro**. · **Stuck?** Ask three people around you first — almost every problem this week is the Google connection: remove it and connect again. · **Finished early?** Share your form with 3 more people right now — KakaoTalk, friends, family. Real answers before next week make a better scenario to build.
