

Week 1 — Getting Started

Wednesday 12:00–14:50 · Lecture: E401 · Practice: PC Labs · Prof. DY Kwon

Today you build: your seat, your accounts, and your task list.

Today you submit: your field in one line + 3 repetitive tasks → on the class website.

Automation = the computer does a repetitive task for you, so you do not do it by hand. This semester, you build one automation every week — for your own work.

1 · Your seat

Write your name on a post-it. Stick it on your monitor.

This is your seat for the whole semester.

2 · Turn on the computer

Turn on the PC. Open the Chrome browser.

Problem? Put the **red paper** on top of your monitor. The professor will come to you.

3 · Join the class chat

Scan with your phone →
KakaoTalk group chat.
Announcements and quick questions live here.

4 · Open the class website

Scan →
Automation in AI
Log in: student ID + school email.
Submitting in class = attendance.

5 · Create your Make account

Go to **make.com** → *Get started free* → sign up with your Google account.

Make is our main tool. It connects apps so they work by themselves.

6 · Your field, one line

A. Work I do now · **B.** Work I want to do · **C.** My work & study

Pick one. Write one line: "*I do ___ for ___.*"

No idea yet? Borrow one: online shop · tutoring · delivery · café · reselling · photography · translation · travel guide · importing · SNS account.

7 · Three repetitive tasks

Write 3 tasks you do again and again by hand — e.g., answering the same customer question · copying orders into a list · tracking application deadlines.

Type your one line + 3 tasks on the website and press Submit. Done — that is today. ✓

ADVANCED — want more this week?

See what automation looks like in a real business, before we build one next week.

Make Academy (free lessons): academy.make.com · **Make official YouTube channel** — start with the *What is Make?* video.
