

Your website, your business

Today we open it together — and we find out what breaks.

E401, then the PC Lab · Prof. DY Kwon · IGS e-Business

Two things, and that is all

One — sign in to the class website

Two — answer three questions about your business

Nothing gets built today. For Make you only **create a free account.**

We open Make properly next week, from zero, together.

This is a test, and you are the testers

I built this website for you. **A whole class has never used it at once.**

Something will break. A sign-in that refuses. A button that does nothing.

That is not a failure of the day. That IS the day.

So here is the loop we run today

You are not complaining. You are doing the work of this course.

Everything lives at one address

negalab.github.io/automation-in-ai

No LMS. No email attachments. No paper forms.

Every week's task, every submission, your attendance. **Later weeks stay locked until the day before class** — so what is open is what is now.

Two codes. Two places to be.

The class website

Sign in · read · submit

The KakaoTalk group

Where you tell me what broke

Sign in on your phone now, and again on the lab PC later — the same site.

Your student ID, and your email. No password.

Nine digits — and the email the school has for you

The address you gave at admission. **Not a new one.**

The first sign-in **locks that email to your ID**, so nobody else can ever use your number.

Wrong email? Raise your hand — ten seconds to unlock.

Submitting in class is your attendance

No name calling. No sign-in sheet. Nothing separate to remember.

The website records the time by itself. You can fix your answers later and **keep the attendance you already earned.**

So the one thing you must do before you leave is submit.

You do not fill a form. You talk.

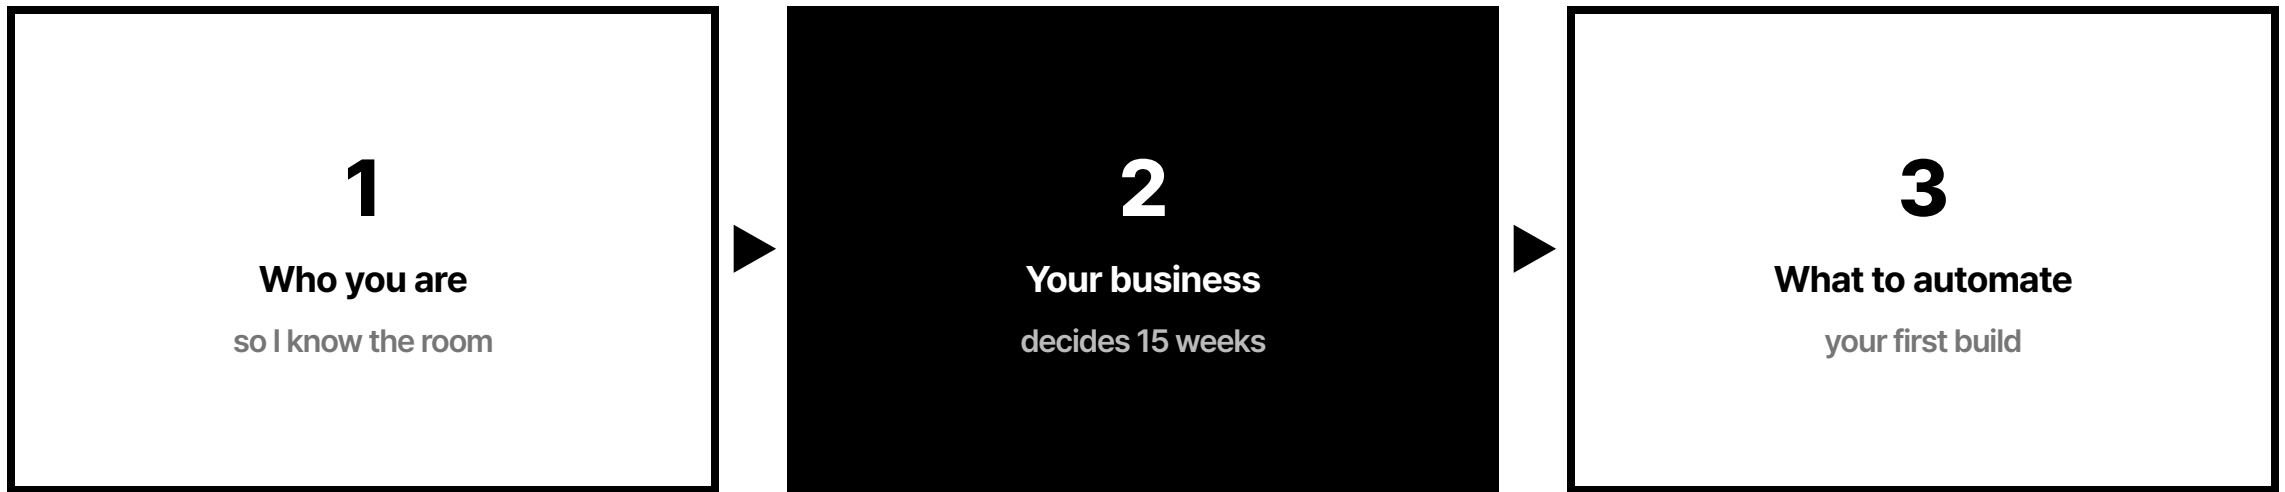

Open Week 2. Press the orange button. Type **start**.

The assistant asks three questions, one at a time, and writes the submission for you.

Nothing is recorded until you press Submit.

Every question is doing a job

These are not warm-up questions. Let me tell you what each one is for.

Introduce yourself

Where you are from, what you study, what you do outside class

There are many of you and one of me. **This is how I learn who is in the room.**

Next week you form your own groups — and people find each other through what you write here.

Two or three sentences is enough. It does not have to be impressive. It has to be you.

This one decides your semester

Everything you build from Week 3 onward comes out of **this one sentence**.

Next week you make a form about it and send it to real people.
You cannot make that form until you know what it is about.

A thin answer here makes a thin semester.

Every week, you automate something from it

You are not automating my example. You are automating your own thing.

Three ways to answer it

A

Work I do now — family shop, side job, online selling

B

Work I want to do — an idea you keep thinking about

C

My work & study — job applications, deadlines, documents

C is not lower. About half of every class starts there.

A visa deadline is a real repetitive task. You can change any time — but you need one today.

Which part would you automate?

One thing you do again and again, by hand

Automation only works on **repetitive** work. If it happens once, there is nothing to automate.

This becomes the first thing you build — so pick the easiest one you can think of. You have fourteen more weeks for the hard ones.

Say why it is slow or boring. That sentence is what we turn into a machine.

Small and boring beats big and clever

Copying orders into a sheet

every day · same shape

"Grow my business"

not a task · nothing to automate

If you cannot say when it happens and what your hands do, make it smaller.

Write in your own language

Nepali · Uzbek · Vietnamese · Urdu · Korean

Do not lose your meaning to your English.

The assistant answers in the same language, and writes your submission in your language **and** in English, so I can read it too.

Something wrong in the draft? Keep talking and it rewrites. Nothing is recorded until you press Submit.

When it breaks, tell me in KakaoTalk

1

Say what you clicked
and what happened instead

2

A screenshot if you can
it saves us both ten minutes

3

My AI fixes it
often the same day

We experiment, and we grow together

Nothing worth building works the first time. Not this website. Not your business. Not the automation you build next week.

The people who finish are the ones who report the break and try again.

Everything you send is saved

Your submissions, their time — and your chats with the AI

I am the only one who reads them. Not to grade you — to fix the class.

If twenty of you get stuck on the same click, I teach that click again next week. **Never other students.**

Please do not type passwords or bank details anywhere on the site.

Today, the account only

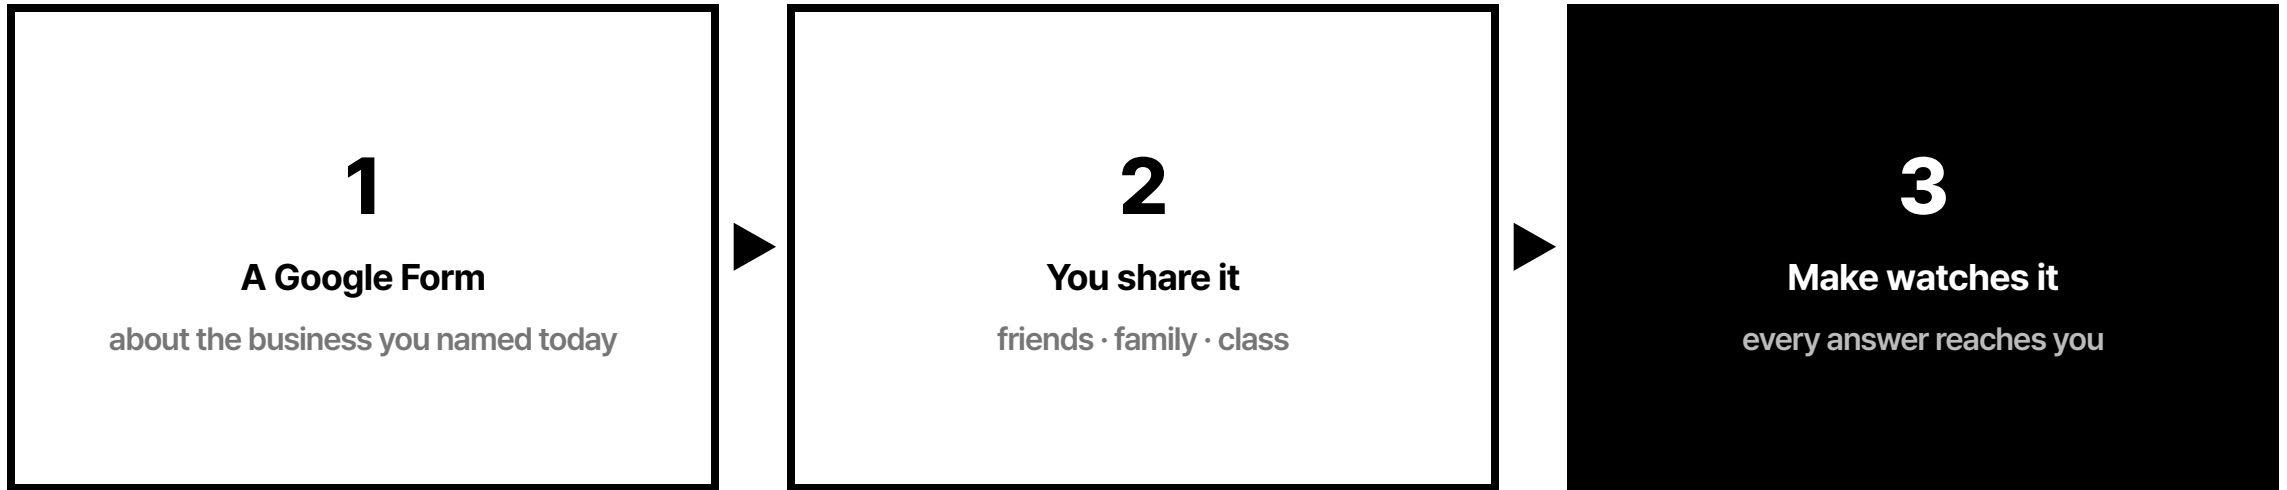

make.com → Get started free → sign up with Google

No Google account? Your email works exactly the same. Free for everything this course does.

Do not try to build anything yet. We open Make properly next week, from zero.

If the sign-up refuses you on the lab network, tell me — that is one more thing worth finding out today.

Project 1 — and your groups

Your first automation is not a toy. It brings feedback on your own idea.

— SEE YOU NEXT WEDNESDAY

Break it, then tell me

KakaoTalk group — any time this week.
