

Automate yourself — your first Make scenario

Wednesday 12:00–14:50 · Lecture: E401 · Practice: PC Labs · Prof. DY Kwon

Once a day, Make reads the new answers in your Week 3 sheet and sends you one summary email. Use the same Google account as last week.

Under the answers, add one last line that is only yours — one thing for your body, or one person to contact today. The design is not finished until you decide what goes into the time automation gives back.

Step 1 — Two points first

1 Your sheet

make.com → Create a new scenario → + → **Google Sheets** → **Watch New Rows**. Create a connection → Sign in with Google. Pick your spreadsheet and the sheet **Form Responses 1**. Table contains headers: **Yes**.

If Make asks where to start, choose **All** — so last week's answers come in too.

2 An email to you

The small + on the right → **Gmail** → **Send an email**. Same Google account. To: **your own address**. Subject: **New answers**. Body: pick one column from your sheet.

Press **Run once**. Five answers? Five emails. **It works — and it is too much**.

Step 2 — The point in the middle, then the clock

3 The gatherer

Between Sheets and Gmail, add **Tools** → **Text aggregator**. Source module: **Google Sheets**. Row separator: **New row**. Text: the columns you want to read. In Gmail's Body, pick the aggregator's **Text** instead of the old column — then type your **last line** under it.

Run once again. **Many rows in, one text out** — five answers, one email.

4 Once a day

Schedule (the clock icon) → **Every day** → pick a time. **Save**. Turn the scenario **ON**.

Why not every 15 minutes? Every check uses one credit, even when nothing is new. Every 15 minutes = 2,880 checks a month — the free 1,000 are gone in about 10 days. Once a day = 30.

There is no AI in this scenario — and it still works, every day. Build with AI, run on rules. Next week AI goes in only one place: it reads your answers and writes a short report on your business.

Submit: talk to the AI assistant and give four things — your **Google account**, the **subject and first lines** of the email Make sent you, **one thing** the answers made you change or keep in your business, and **your last line** and why. The assistant reads it back — say yes, and it is saved. · **Stuck?** Google sign-in does not open → allow pop-ups for make.com. No rows → wrong account, or an empty row in your sheet (Make stops there). No email → check Spam, and press Run once. Write down the exact error, ask three people around you, then raise your hand. · **Finished early?** Share your form with 3 more people — more answers today, a better email tomorrow.
