

Automate yourself — your first Make scenario

Wednesday 12:00–14:50 · Lecture: E401 · Practice: PC Labs · Prof. DY Kwon

CLASS SITE · SUBMIT HERE
negalab.github.io/automation-in-ai

Once a day, Make checks your Week 3 sheet and emails you every new answer — and the professor too. Use the same Google account as last week.

Under the answers, add one last line that is only yours — one thing for your body, or one person to contact today.

Step 1 — Two points, from zero (connect on the PC, build on your phone or PC)

1 Your sheet

make.com → ≡ → **Scenarios** → + **Create a new scenario** → the big + → **Google Sheets** → **Watch New Rows**.
Search by path · My Drive · your Week 3 spreadsheet · Sheet Name **Form Responses 1** · headers **Yes** → Save.
Not the template — its Gmail point is an old one that personal Gmail accounts cannot connect.

2 Connect each account — the most important step

Create a connection → **Sign in with Google** → the **same account** as last week → **tick every box** → **Continue**.
Gmail needs its own connection.

Do the connections on the PC. On a phone the **Google sign-in window does not appear** → 403 "unregistered callers".
Then ≡ → **Credentials** → delete it → connect again on the PC; your phone uses it after that.

3 An email to you — and to the professor

The small + → **Gmail** → **Send an email** (always add it new). To: **your own address** → Add recipient → **smit.ai.lab@gmail.com**. Subject: **W4 · your name · New answer**. Content: for each question, type a label → click the question block → type **
. Not the **[bundle] block — it sends the row as code. At the bottom, your **last line**.
Save.

Right-click the Sheets point → **Choose where to start** → **All** → Save. Then **Run once** — one email for each answer.

Step 2 — Test again, then the clock

4 Only what is new

Press **Run once** again — nothing comes. Make sends **only rows added since the last run**. To test again, **fill in your own form once more** → a new row → **Run once**.

5 Once a day

In the toolbar, tap **Every 15 minutes** → Run scenario: **Every day** → pick a time. **Save. Activate scenario.**

Why not every 15 minutes? Every check uses one credit, even when nothing is new: 2,880 a month against the free 1,000.
Once a day = 30.

CHECK BEFORE YOU SUBMIT — all five, or the draft will not appear: ☐ **Subject starts with W4** ☐
smit.ai.lab@gmail.com in To ☐ **a new row + Run once** ☐ **the email is in your Gmail** ☐ **in the chat, your**
Gmail address → **ARRIVED ✓** → **Submit** → **saved**

Submit: talk to the AI assistant — three things: the Gmail address that sent it + the subject and first lines, **smit.ai.lab@gmail.com** and **W4**, and one thing the answers tell you. The server checks the professor's inbox; no W4 = not accepted. · **Stuck?** 403 → connect on the PC. "Restricted scopes"? Old Gmail point — add Gmail again from +. No rows → wrong account, or an empty row. No email → Spam, or no new row. Ask three people around you, then raise your hand. · **Make's own lessons:** help.make.com/create-your-first-scenario · help.make.com/expand-your-scenario · apps.make.com/google-sheets · apps.make.com/google-email
