

Your own key — plug Gemini into Make

Wednesday 12:00–14:50 · Lecture: E401 · Practice: PC Labs · Prof. DY Kwon

Last week you borrowed an AI. Today it becomes yours. You make a key, connect Google Gemini with it, and swap it into last week's scenario. Same four points — one point changes owner.

Three steps plug any outside service into Make: **KEY** (made on its site) → **CONNECTION** (paste once into Make) → **MODULE** (pick an action, drop in blocks).

Step 1 — Make your key

1 Google AI Studio

aistudio.google.com → sign in → the small **key icon** at the bottom of the left menu → top right **Create API key** → name it, choose a project → **Create key** → **Copy key** (it starts with AQ.). School account says "not available"? Use your personal Gmail.

Key will not come? ("Unable to create API key" · "permission") That is Google, not you. In order: ① open console.cloud.google.com once with the same account (a project appears by itself) → back to AI Studio → Create API key → pick that project ② a private window with **only** this account ③ an **older Gmail** — Google does not trust a brand-new account yet ④ no older account: today take the **no-key road** — Google Gemini AI → **Simple text prompt** (Make's tokens, Gemini 2.5 Flash only). Swap, submit, bring a key next week.

A key is a password. Anyone who has it uses your account as you. Never paste it into KakaoTalk, the class assistant, a screenshot or an email. Leaked? Delete it and make a new one — 30 seconds.

Step 2 — Connect it

2 Right-click the line, as always

Open **last week's scenario**. Right-click the **LINE** between your old AI point and Gmail → **Add a module** → search **Gemini** → app **Google Gemini AI** → **Generate a response**. **Not** Simple text prompt — it has no key box and runs on Make's tokens (last week again). The module opens with a **Connection** box: **Create a connection** → paste into **API Key** → Save. **Model**: one with **Flash** in its name — not **Image** (no free tier).

Step 3 — The same move, again, then swap

3 Prompt in, email out

Copy the whole prompt from the **old** AI point → paste into Gemini's prompt. After **ANSWERS**: the last thing must be the green **Text** block from the gathering point — letters instead? delete and click the block. Keep **"Put
 at the end of every line."**

Gmail → orange bar **"reauthorize your connection"**? Reauthorize → sign in → Save. Then **Content** → delete last week's AI block → under **Google Gemini AI** click the block that holds the answer (**Result**). Subject: **W6 · your name · My Gemini report**. Keep smit.ai.lab@gmail.com in To.

4 Remove the borrowed AI, then run

Right-click the **old** AI point → **Delete module**. Four points: Sheets → Gather → **Gemini** → Gmail. Line broke? Drag from the gathering point to Gemini. Right-click **Sheets** → **Choose where to start** → **All** → Save → **Run once**.

Free tier: Google's price page says **"Used to improve our products — Yes."** Survey answers yes; names, phone and ID numbers no.

CHECK BEFORE YOU SUBMIT — all five: ☐ four points: **Sheets, Gather, Gemini, Gmail** ☐ Gemini's prompt ends with the **Text** block ☐ Content holds Gemini's block only ☐ Subject starts with **W6**, smit.ai.lab@gmail.com in To ☐ Run once → the report arrived

Submit: paste Gemini's report · compare it with last week's · the next service you would plug in. Type the Gmail address you connected when asked — **never your key**. No **W6** = not accepted. · **★ Extra**: finished? Add **Show more** → **Generate speech from text** after Gemini and attach the sound file — a star goes on your card. · **Stuck?** no Connection box → you picked Simple text prompt · "API key not valid" → copy again · orange bar on Gmail → Reauthorize · "Quota / 429" → wait one minute · one long line → the **
** sentence is missing · nothing came → no new row.
